

Introducing SecureCloud

Email protection | SaaS protection | Endpoint protection | Data protection | Malware & Ransomware protection

Using Office 365, G Suite, or Dropbox? Discover why nearly 4 million professionals trust SecureCloud to protect their data every day.

Get the only, all-in-one, enterprise security solution built and priced for businesses with lean IT organizations.

Without SecureCloud, a breach could close your business

Cloud applications are not protected against data leaks

Hacker's using stolen passwords to access your data, or an employee mistakenly sharing customers' information – you are liable for data leakage.

Current security can't block regulatory violations

Privacy regulations, GDPR, HIPAA, PCI, PII and cyber insurance policies require you to identify and protect PII/PCI/PHI. Don't risk regulatory fines.

Antivirus can't stop Ransomware or Malware in cloud applications

Employees using their own devices to access cloud applications can introduce malware or ransomware that will corrupt your business data.

60%
of SMBs close within six months of being hacked.

58%
of cyber attacks target small businesses

SecureCloud makes security simple

Coronet's SecureCloud is the only all-in-one, enterprise-grade cybersecurity solution that's cost-effective and provides instantaneous protection.
